Zumix is a control skid composed of a volumetric pump (electric or air) and static mixer.

The control skid in the photo is composed by a membrane pump of 3". Overall dimensions 80x120cm

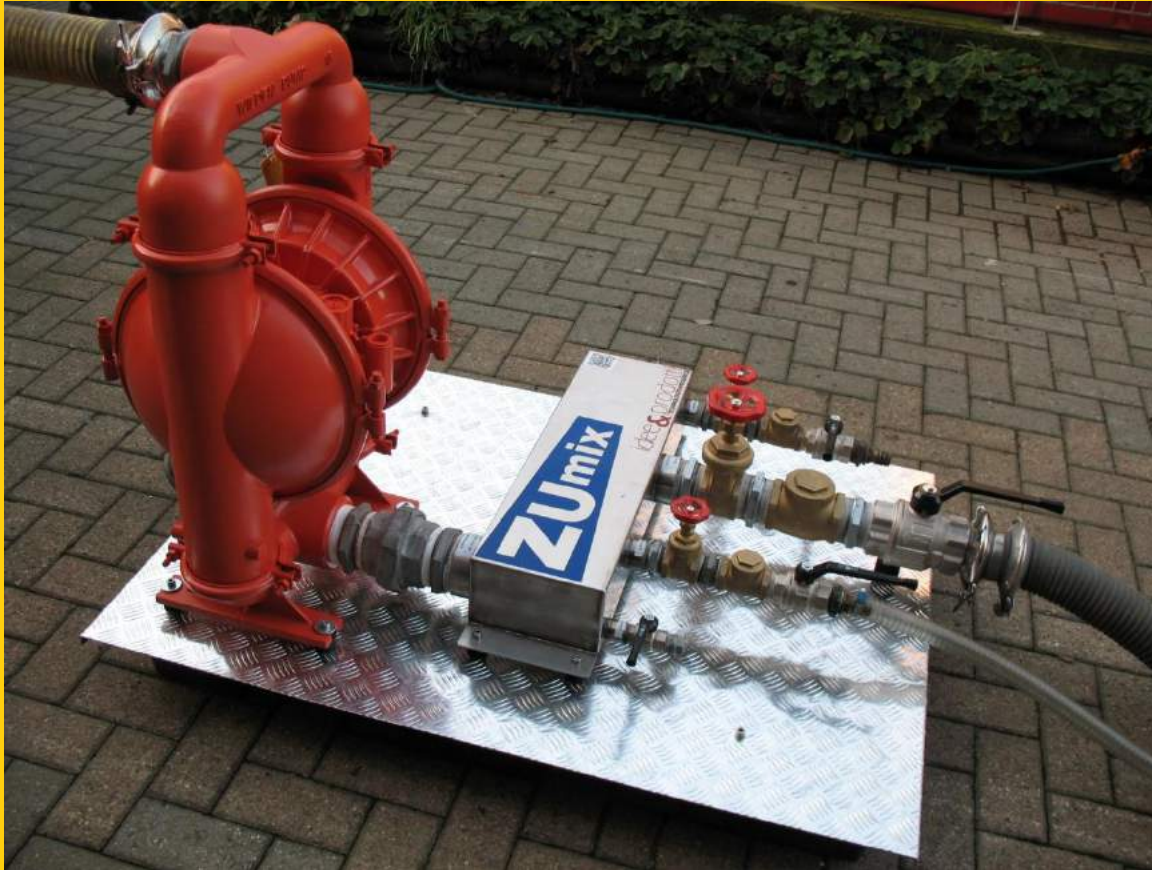

Zumix's advantages: makes four operations inline and in continuous

1. Sludge suction
2. Additive dosage
3. Inline sludge/additive mixing
4. Dewatering system feed

Easy and safe in line additives feed
The polyelectrolyte metering pump is not necessary

Static mixer is designed in AISI 304: it can be a parallelepiped as in the photo. It is as truncated cone equipped with Kodrill check valve in case of hard wastewater to treat.
